DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 7-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Guelich (U.S. Patent 5,841,020).

Regarding claim 1:

Guelich discloses a method of monitoring the proportion of a component in a gaseous mixture having at least two components (col. 1, lines 5-25) and contained in an electrical switchgear enclosure (fig. 1, unit 14, 8), said method consisting in measuring the pressure, the temperature, and the density of the gas mixture by means of sensors mounted on said enclosure (col. 2, lines 11-33), and in determining said proportion by processing the measured values in a data-processing unit, so as to enable the mixture to be monitored non-intrusively (col. 1, lines 20-25, col. 1-2, lines 50-48).

Regarding claims 2, 3, 7, 8, 9:

Guelich discloses:

A method in which said proportion of a component in the mixture is calculated by the data-processing unit which is programmed to solve the thermodynamic state equations of said components (col. 1-2, lines 63-9).

A method in which said proportion of a component in the mixture is determined by the data-processing unit which stores a data table in a memory (col. 4, lines 11-65, col. 10, lines 1-40), said data table containing a plurality of data items representative of various proportions of said component in correspondence with data items representative of various measurements of the pressure, of the temperature, and of the density of the gas mixture containing said component (col. 10, lines 1-40, col. 1-2, lines 50-33), the data process is a computer (col. 4, lines 11-45).

Electrical switchgear provided with an enclosure containing a mixture of at least two dielectric gases under pressure, wherein the proportions of the dielectric gases in the mixture are determined by implementing method (col. 2, lines 11-48)

Claim Objections

2. Claims 4, 5, 6 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all the limitation of the base claim and any intervening claims.

The following is an examiner's statement of reasons for allowance: prior art fail to teach the use of vibrating-blade sensor, the capacitance is a function of the

permittivity of the gas mixture, inferferometer, the gases constituted by N2 and SF6 or CF4 and SF6.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
